

## **Trim-Lite™ No Longer Needed On 20-Min Non-Hose Stream Doors**

The Marshfield DoorSystems Trim-Lite system is no longer required on 20-minute fire doors with ¼" wired glass that are not required to pass the hose stream portion of fire testing. Both Intertek Testing Services – Warnock Hersey (ITS-WH) and Underwriters Laboratories (UL) have approved this engineering change. This improvement brings forth many exciting benefits including lower installation costs, quicker installation and reduced field hassles.

Canada and all other areas that require 20-minute fire doors with ¼" wired glass to pass the hose stream portion of fire testing will still require the use of Marshfield DoorSystems' Trim-Lite system. The Trim-Lite system that is required for these doors will now be referred to as Canada Trim-Lite Moulding.

Doors installed in the United States and Mexico are now able to use flush (W-6, W-7, or W-8) or lipped (W-2 or W-3) bead moulding profile without Trim-Lite on 20-minute doors with ¼" wired glass.
