## Tech Bulletin – STC44-47 with Raceway

Due to the industry need for a sound door in a security controlled environment, Marshfield DoorSystems is now offering an option for electronically controlled hardware in our sound doors STC44 through STC47, including fire rated doors.

This offering includes most electric locks, panic devices and fire exit hardware. The electronic power transfer is limited to electric hinge only. Doors will be constructed with a conduit in the door and provided with a CABLE SOLID CONDUCTOR AWG18/4 (18 guage - 4 lead wire ). This wire may be used for hardware or it can be used to pull any other required wires. ( Conduits are not large enough to pull QC connectors through the door.)

Addition of raceway conduit may affect STC rating. Product was laboratory tested without conduit.

If you have any questions or would like additional information on this subject, please contact your Inside Sales Representative at 800-869-3667.
